SUMMARY

To Build a career as a Data Scientist and Machine Learning Engineer, leveraging emerging technologies and my expertise in Python, SQL, machine learning to contribute to organizational growth and innovation.

PROFESSIONAL EXPERIENCE

Data Science and Machine Learning Engineer

Smart Solutions Inc. — **Sep 2024- Present**

- Designed and implemented a smart inventory management system leveraging machine learning to predict stock levels and optimize restocking.
- Built predictive analytics models using Python and scikit-learn, achieving a 90% accuracy rate in inventory forecasts.
- Automated data pipelines using Python scripts and ensured data integrity through rigorous validation checks.
- Conducted exploratory data analysis (EDA) and visualization using matplotlib and seaborn to extract actionable business insights.
- Delivered weekly progress reports to stakeholders and coordinated with cross-functional teams for system integration.

Machine Learning Engineer Intern

Tech Innovators Pvt Ltd — **Feb 2024 – Aug 2024**

- Developed and deployed machine learning models for waste classification to enhance sustainable waste management.
- Performed feature engineering, data preprocessing, and hyperparameter tuning for model optimization.
- Integrated the ML model with a web interface for real-time waste sorting feedback.
- Worked on Python libraries like pandas, NumPy, and sklearn for data analysis and modeling.
- Collaborated with the IoT team to integrate sensors for real-time data collection.

TECHNICAL SKILLS :

- **Programming**: Python, SQL
- **Data Science**: Linear Regression, Logistic Regression, KNN, Decision Tree, K-Means
- **Machine Learning Tools**: pandas, NumPy, matplotlib, seaborn, scikit-learn
- **Database Management**: DBMS, SQL
- **Software Tools**: JIRA, Confluence

EDUCATION

Bachelor of Engineering : Computer Science and engineering — **2020-2024**

PROJECTS :

1.Automated Waste Classification Using Machine Learning

- Developed an innovative automated system for classifying and sorting waste to promote sustainability and efficient recycling.
- The solution leverages machine learning to classify waste images into categories such as recyclable, organic, and non-recyclable, achieving high accuracy.
- Collected and annotated a diverse dataset of waste images to ensure a balanced representation of different waste types.
- Integrated the trained machine learning model with IoT sensors to classify waste in real-time.
- Deployed the solution on an edge computing device for real-time application.
- Designed a user-friendly interface to display classification results and suggestions for waste disposal.

Tools and Technologies: Python,Pandas, NumPy, Matplotlib, Seaborn,IoT-based sensors.

2.Rapid Rack: Smart Inventory Management System

- Designed and implemented an advanced inventory management system leveraging machine learning and data visualization to optimize stock levels and reduce operational inefficiencies.
- Collaborated with stakeholders to understand business needs and challenges in inventory management.
- Designed an end-to-end pipeline for automated data ingestion, transformation, model training, and deployment.
- Built interactive dashboards using Tableau and Python libraries to provide real-time insights into inventory trends and forecasts.
- Enabled stakeholders to monitor stock levels, identify patterns, and make proactive inventory decisions.
- Deployed the predictive model on a cloud platform for scalability and accessibility.

Tools and Technologies: Python,Pandas, NumPy, Scikit-learn, Seaborn,Tableau.

DECLARATION

I hereby declare that all the information provided above is true and correct to the best of my knowledge.
